

Ongoing major corruption in the German BAMF

Britta

Today I made an attempt to follow up on the matter of further medical documentation with the local medical practice that serves my facility, as was requested in the document associated with my new residency permit. I explained the nature of the problem to one of their doctors - the permanent brain damage that I have suffered as a result of the 2012 poisoning mentioned previously, as part of the human trafficking attempt by London Business School to have me hired to the Sotheby's Palm Beach office, and the affiliated Jewish organized crime interests involved.

I mentioned that the BAMF requested that I provide a medical report specifically outlining the probable consequences of my medical condition as I age. I found this amusing - after all, your agency was presented with three medical reports outlining the problem already. The rational conclusion to arrive at is clear. The process of inducing a schizophreniform disorder with stimulants - and this is what happened to me - can result in the death of the patient. Officially, it has only been attempted in laboratory animals, and many of these animals (mice or dogs, typically) die. Their hearts give out, and the animals experience cardiac arrest and die, before extended sleep deprivation and renewed hyperperfusion of blood to the brain can occur to a sufficient degree that abnormal neuronal growth begins. The only reason this did not occur with me is that I had been an accomplished long-distance runner in university. My heart was in very good shape and could tolerate 150-200 beats per minute for an entire week in an hospital bed. Most people will die under these circumstances.

When a government gives consent for an innocent victim to experience this level of medical experimentation and abuse at the hands of an ethnic (Jewish, in this case) crime ring, it is clear that this government cannot be trusted with that victim's health ever again. As such, while the residual effects I experience today - distorted perception of background audio, and occasional auditory hallucinations and/or misperceptions that occur with greater frequency when I experience sleep deprivation - are not fatal by themselves, it is clear that returning to the United States would very likely result in my death at the hands of criminals in the medical profession. What route they would choose I can't say, but - for example - they did clearly make attempts to have me poisoned and then murdered under pretenses of COVID in 2021. As a reminder, in 2018 the Bern police concurred with this: they told me, via my government-provided attorney, that I should return to Russia rather than to the United States, as it was likely that my life was still in danger. They also reimbursed me for my return ticket to Saint-Petersburg on Belavia, despite an attempt by Jewish organized crime networks via a refugee assistance NGO to return me to Florida without any return assistance. Meanwhile, American actor Bruce Willis is just beginning the process of being gratuitously murdered in public view, just as my grandfather J. Alan Smith was in 2008-

2017, via a diagnosis of frontotemporal dementia. Essentially, he is being poisoned to such a degree (exactly how we don't yet know) that the frontal lobe of his brain is beginning to dematerialize.

I would like to make clear, Britta, that your doctors in Germany have already become quite embarrassing in terms of the reports they produce. The young female psychiatrist I met in Freiburg im Breisgau immediately diagnosed me with paranoid schizophrenia, based on an incident in which I had been literally stalked in Freiburg by the same Jewish crime ring in order to interfere with my mail. I had a picture of the man stalking me and the police had helped me with the mail issue - that never changed her mind. But that is how the criminal side of psychiatry always is - they even fail to take interest in the reason why these Jews do this to people. It's incredible to watch.

As I explained to her, schizophrenics are often (though not always) victims of a criminal branch of the medical profession - that of psychiatry. Once formally diagnosed, they are typically poisoned via custom generic variants of drugs with a variety of poisons included in the packaging. Many of these drugs are still on-patent, and merely licensed to producers of these generics, and so their chemical formulas and pharmacological interactions remain unpublished. Most, aside from the first-generation drugs, are essentially fake drugs that cause other major symptoms. In essence they transform patients, many of whom are just poisoning victims - victims of crime - into revenue streams for inexperienced and/or unqualified doctors.

I want to make clear, Britta, that I am too old and too smart to have this problem with you and with the German government. Your country borders the former eastern bloc. There will be effectively no tolerance for any more medical fraud against me, no matter how much Blinken, Gitenstein, Adler, Pressman, and the rest of the criminal Jewish-American "legal" contingent at the U.S. Department of State threaten and/or pay your criminals at BAMF. So either you do this correctly, or I will merely aid you and the German government to self-destruct, in full public view. In my opinion, it is long overdue. The BAMF is a criminal organization and Germany is rapidly becoming a failed state. Nevertheless, I can only hope you will choose to avoid this outcome.

There are other, less significant health issues as well. I had an heart attack in August 2018, probably as a result of either EMI/RF experimentation via mobile telecom while in Russia, or poisoning, or both. Additionally, the Americans make ongoing attempts to introduce a variety of poisons to my food and drink wherever I go; they often poison almost anything that I regularly purchase at any grocery store or restaurant, particularly if I make purchases on traceable debit or credit cards. What are the long-term implications of that? I wait with bated breath for your "doctors" to weigh in.

Attached is a scan of my latest German ID. Its issuance date has been illegitimately backdated by over two months (see attached issuance correspondence).

As you are aware, I have been fighting for quite some time to have my identification documents formally identified (from fingerprints) and exchanged for appropriate German equivalents since my arrival in July 2022. It is now perhaps worth mentioning that I am only in Germany due to an ongoing major
